Description

What is a data-logger?

A Data-logger is a simple way to store and record data over a period of time that can then be interrogated. Data-loggers have a waterproof casing so they can be left in numerous places to monitor different factors such as internal or external temperatures.

You can choose the information that you would like to analysis and the data-logger will then record this for you. Your stored data can then be downloaded to your pc at the simple click of a button which can then be viewed in graphs, charts or even exported to other programs.

What applications can I use a data-logger for?

Data-loggers are used for many applications, which will help you ensure that you are being compliant with legislation laws, ensuring quality products or processing and for research purposes.
